

## SteelEye Protection Suite for IBM® Director

Ensuring the availability of business-critical applications and data sources is a primary function of every IT shop. For companies looking to optimize and automate the management of their IT environments, IBM has developed Director, an integrated suite of tools that provide flexibility in system management capabilities to maximize system availability and lower hardware and software management costs. With IBM Director, local and remote detailed monitoring of the all system hardware and tracking the usage and performance of critical components, such as processors, disks, and memory is automated and simple. Administrators now have intuitive yet powerful systems management software that supports their complex environment.

### SteelEye Solution Overview

Given IBM Director's role as a central platform to monitor and proactively manage IT-based business resources, its own availability is critical. The LifeKeeper Protection Suite for IBM Director ensures this by providing high availability protection and eliminating the potential for IBM Director Server being a single point

of failure within the system management chain. LifeKeeper constantly monitors Director Server processes and database to ensure that all components are properly working. If a failure is detected, LifeKeeper perform the necessary actions to return Director to operation. LifeKeeper also supports manual switchover of Director processes among servers so that planned maintenance can be performed without downtime.

Protect Director with SteelEye LifeKeeper and:

- Eliminate Director Server as a potential single-point-of-failure
- Ensure appropriate alerts continue to be sent on hardware health issues
- Allow any needed hardware maintenance of the IBM Director Server without losing access to the important management tasks
- Continue proactive management through event action plans
- Provide the highest levels of availability possible for your IT management infrastructure

### Key Features:

- Comprehensive high availability clustering solution designed specifically for IBM Director Server
- Protects Director 5.x
- Shared Storage or Data Replication configurations
- Derby, SQL Server and Oracle database support and protection
- Monitors Director server along with its database and performs local and remote recovery
- LifeKeeper is ServerProven, StorageProven and ClusterProven

### About SteelEye Technology

SteelEye is the leading provider of data and application availability management solutions for business continuity and disaster recovery for Linux and Windows and virtual environments.

The SteelEye family of data replication, high availability clustering and disaster recovery solutions are priced and architected to enable enterprises of all sizes to ensure continuous availability of business-critical applications, servers and data.

To complement its software solutions, SteelEye also provides a full range of high availability consulting and professional services to assist organizations with the assessment, design and implementation of solutions for ensuring High Availability within their environments.
